

Toploader OS Guide

Getting Started with Toploader OS

Install the app, understand the main sections, configure your seller settings and follow the recommended first workflow.

Start here before building inventory or exporting CSVs.

Applies to Toploader OS v1.4.7. Use this guide as workflow support, not as financial, legal, tax or marketplace policy advice.

What this guide covers

1. The recommended first workflow
2. App sections at a glance
3. Set up before importing lots of stock
4. A safe first test
5. Final checklist

The recommended first workflow

Toploader OS is built around a simple seller loop: add inventory, prepare stock for a show or marketplace export, reconcile sales, then review analytics. You do not need to use every section on day one. Start by configuring settings, adding a small test inventory and running a sample export preview.

- 1 Open Settings and confirm region, currency, fee assumptions and export defaults.
- 2 Create or select the inventory profile you want to use.
- 3 Add a few single cards using Scryfall search and at least one sealed or accessory product.
- 4 Use validation before exporting anything to Whatnot or eBay.
- 5 Log a test sale or reconciliation and confirm Analytics updates as expected.

App sections at a glance

Section	Use it for
Inventory	Add singles, sealed products, accessories, images, stock quantities and listing overrides.
Show Builder	Create show batches, allocate quantities, preview payout and export show CSVs.
Imports / Exports	Review ManaBox imports and marketplace CSV export history.
Optimizer	Calculate fee-aware bundle and break pricing.
Event Builder	Build box break or surprise set pools from inventory.
Live Tools	Record pulls, balance live set pricing and check buyer want lists.
Analytics	Review sales, payouts, net profit, stock value and inventory health.
Settings	Configure fees, region, export defaults, Pro licence, backups and privacy.
About	Check updates, support links, legal notices and Pro status.

Set up before importing lots of stock

- **Region and currency** - Choose UK/GBP or US/USD so pricing displays consistently.
- **Fee settings** - Update commission, processing, flat fee and VAT/tax assumptions before margin pricing.
- **Inventory profile** - Use separate profiles for different businesses, collections or stock sources.
- **Backup habit** - Create a backup before bulk imports or major reconciliations.
- **Pro licence** - Activate Pro if you need imports, exports, reconciliation, multiple inventories or bulk workflows.

A safe first test

Before relying on Toploader OS for a live show, test the full cycle with a small batch. Add five single cards, one sealed item and one accessory. Validate an export, create a show batch, reconcile a few dummy sales and check Analytics. This confirms your settings and habits before real stock is involved.

Final checklist

- Settings reviewed and saved.
- A backup exists.
- At least one inventory profile is selected.
- A small test inventory has been added.
- Export validation has been tested before any real marketplace upload.

Keep this guide near the app while you build muscle memory. The best workflow is usually inventory first, show or export second, reconciliation third, analytics last.

Disclaimer

Toploader OS is an independent seller workflow tool. Marketplace fees, CSV templates, platform rules and third-party data can change. Always preview exports before uploading and use your own judgement before pricing or listing stock.
